This is a product produced from large high quality reserves located in Oregon. Careful separation and purification of natural Zeolite provides highly absorptive mineral.

CHEMICAL CHARACTERISTICS:
- SiO2: 67.9%
- Al2O3: 10.6%
- K2O: 4.75%
- Fe2O3: 2.58%
- CaO: 1.27%
- Na2O: .81%
- TiO2: .29%
- Others: less than 0.25% each

PHYSICAL CHARACTERISTICS:
- Combustion Temp: Will not burn
- pH: 6. to 8.
- Cation Exchange Capacity: 170 meq/100g Ammonium Acetate Method
- Color: Off White
- Particle Shape: Sheet Platelets
- Hardness, Mohs: 1 to 2, very soft
- Water Absorption: approx 70% H2O at Saturation
- Particle Size: 100 mesh and finer
- Mineral Species: Clinoptilolite

ORIGIN: USA

PACKING: 50 Lb paper bags 2500 lbs/ wooden pallet or supersacks
