ATTAPULGITE 30/60 RVM

Attapulgite 30/60 RVM is a non-swelling bentonite class of montmorillonite. Its low bulk density and high absorptivity allow higher liquid holding capacity. Processing maximizes the granule's micropore space. Heat treatments impart a hard, inert granule with a high resistance to attrition. Its characteristics make it well-suited in crop protection and turf care. Its fast absorption makes it very useful in spray-on applications.

Chemical Analysis

	<u>Weight % (on a dry basis)</u>
SiO ₂	76.7%
Al ₂ O ₃	11.3%
Fe ₂ O ₃	6.5%
MgO	2.0%
CaO	0.6%
Na ₂ O	0.1%
Trace Compounds	2.2%

Physical Analysis

Particle Count	10.0 MM/lb
Packed Bulk Density	37 lbs/ft ³
pH	5
Liquid Holding Capacity	31% (by weight)

Packing

- 40 lb. bags
- Supersacks
- bulk

Origin USA
