Glass Filter – Pools

This is a recycled glass product made entirely from clear glass sources. It has consistent physical properties making this an inexpensive filter that does not contain any crystalline silica. Standards of high-rate sand filtration apply and unlike sand, glass has a slightly negative charge on its surface to attract fine particles. Filtration takes place throughout the entire depth bed allowing for a larger portion of containment suppression due to its lower density than sand. The material comes in various particle sizes ranging from 6 – 40 microns.

Typical Chemical Analysis

SiO ₂ *	74.0 %
CaO	10.4 %
Al ₂ O ₃	1.3 %
Na ₂ O	13.0 %

**Silica is amorphous*

Packing

- 25 kg bags
- Super-sacks

Origin Canada
