GREY SLATE FLOUR

An insoluble, decomposed Silica, brownish or grayish in color. It is often used as a soft, mild abrasive, in various types of polishes, for rubbing varnished woodwork and hard rubber. It is also used as an ingredient in the manufacturing of brake linings, and as a filler in many applications

Chemical Analysis:

Silica	62.28%
Alumina	20.71%
Iron Oxide	7.65%
Calcium Oxide	2.52%
Magnesium Oxide	2.02%
Sodium Oxide	1.21%
Potassium Oxide	3.61%

Typical Physical Analysis

Specific Gravity	2.68%
Bulking Value (gallons per lb.)	0.447
Pounds per gallon	22.37
pH	8.1
Oil Absorption	22
Moisture	1.0% (max at time of shipment)

CLASSIFIED: Alumina Silicate CAS# 1335.30.4

ORIGIN: USA
