FLUORSPAR METALLURGICAL GRADE - I

Also known as Fluorite, Fluorspar is often used as a flux for smelting, and in the production of certain glasses and enamels. The metallurgical grade is used as a flux to lower the melting point of raw materials in steel production to aid the removal of impurities, and later in the production of aluminum.

CHEMICAL ANALYSIS (percent by weight):

Element	Specifications
Calcium Fluoride (CaF ₂)	70-80%
Silica (SiO ₂)	Max 10%
Calcium Carbonate (CaCO ₃)	Max 10%

PHYSICAL ANALYSIS

Two sizes:

1/4-3/4"

1/2-1-1/2"

Packing: Bulk

Origin: Mexico

Please note that amounts are averages and not guaranteed
